

II. AMENDMENTS TO THE CLAIMS

Please amend the claims as follows:

1. (Currently Amended) A foldable box having a flap locking system, comprising:

a first flap having an edge with a generally trapezoidal shaped tab cut therein, wherein said generally trapezoidal shaped tab is defined by two inwardly projecting grooves that project toward each other and are substantially parallel to the edge of the first flap; and

a second flap that locks with the first flap, wherein the second flap includes an edge with a second generally trapezoidal shaped tab cut therein, and wherein said second generally trapezoidal shaped tab is defined by two outwardly projecting grooves that project away from each other and are substantially parallel to the edge of the second flap.

2. (Original) The foldable box design of claim 1, wherein the second flap includes diagonal folds that project from the two outwardly projecting grooves to opposed edges of the second flap.

3. (Original) The foldable box design of claim 1, wherein the flaps reside on an outside portion of the bottom of the box when assembled.

4. (Currently Amended) A one-piece, collapsible container, comprising:

a plurality of side wall panels foldably joined to each other;

a plurality of flaps, each flap being foldably joined to an edge of a an associated side wall panel; and

an interlocking mechanism residing on a first and second opposing flaps of the plurality of flaps, wherein:

the first opposing flap includes an outer edge with a first tab cut therein, wherein the first tab is defined by two inwardly projecting grooves that project toward each other and are substantially parallel to the edge of the associated side wall panel; and

the second opposing flap locks with the first opposing flap, and includes an outer edge with a second tab cut therein, wherein the second tab is defined by two outwardly projecting grooves that project away from each other and are substantially parallel to the edge of the associated side wall panel.

5. (Original) The container of claim 4, wherein the second opposing flap includes folds to facilitate interlocking between the first and second opposing flaps.

6. (Original) The container of claim 4, wherein the flaps containing the interlocking mechanism reside on an outside portion of a bottom of the box when assembled.

7. (Original) The container of claim 4, wherein the assembled box is octagonal in shape, and the side wall panels comprise four opposing pairs of foldably joined panels.

8. (Original) The container of claim 4, further comprising a third and fourth opposing flaps, said third and fourth opposing flaps being shaped to permit their partial overlap and formation of a substantially flat surface.

9. (Original) The container of claim 8, wherein the third and fourth opposing flap is each substantially "L-shaped."

10. (Currently Amended) The container of claim 4, wherein the first and second tabs are trapezoidal shaped.

11. (Currently Amended) An interlocking mechanism ~~residing~~ implemented on opposing edges of a first member and a second opposing member, wherein:

the first member includes an edge with a first trapezoidal shaped tab cut therein, wherein the first trapezoidal shaped tab is defined by two inwardly projecting grooves that extend toward each other along a first common axis; and

the second member locks with the first member and includes an edge with a second trapezoidal shaped tab cut therein, wherein the second trapezoidal shaped tab is defined by two outwardly projecting grooves that extend away from each other along a second common axis.

12. (Original) The interlocking mechanism of claim 11, wherein the first member further includes a pair of receiving tabs that are cut away from the first trapezoidal shaped tab.

13. (Original) The interlocking mechanism of claim 12, wherein the second member further includes a pair of locking tabs that are cut toward the second trapezoidal shaped tab.
